

Chapter 1

BUG 001

Bug:

Internal links in PDF edition types appeared incomplete (without the `` closing tag). Other types of editions were OK (i.e. epub).

Expected behaviour:

Internal links should be correctly rendered in PDF edition types.

NOTE: Links are colored in the following examples.

- External links must be BLUE.
- Internal links must be RED.

Example with Markdown links:

[This is a Markdown internal link](#the-link-to-test)

This is a Markdown internal link (page 3)

Example with HTML links:

`This is a Markdown internal link`

This is an HTML internal link (page 3)

`This is an HTML internal link with a class`

[This is an HTML internal link with a class \(page 3\)](#)

External links are not modified:

```
<a href="http://google.com">Link to Google</a>
```

[Link to Google \(http://google.com\)](http://google.com)

1.1 The link target

This is the link target for #the-link-to-test

[Return](#) (page 1)
